Profile

I help organizations turn AI opportunities into working products and more effective operations. I combine hands-on engineering with AI strategy, technical assessment, and team leadership, drawing on experience at Instabase and seven years at Contract.fit. My focus is document automation, generative AI, and systems that can reason through complex workflows and correct their own mistakes. PhD in Computer Science from KU Leuven; independent consultant through Probably Approximately Human BV.

How I Help

Strategy & diligence: Assess AI opportunities, review technology and architecture, compare build-versus-buy options, and develop practical implementation roadmaps.

Prototypes & delivery: Build and validate AI applications, adapt models to business needs, and take document-processing and knowledge-retrieval workflows into production.

Reliable automation: Measure accuracy and automation coverage, address difficult failure cases, and use confidence estimates to inform when human review is needed.

Technical leadership: Translate business needs into product requirements and system architecture; lead focused engineering teams and mentor technical staff.

Selected Business Impact

Automation: At Instabase, improved accuracy from **94% to 100%** and straight-through processing (completion without manual intervention) from **30% to 100%** on one flagship enterprise dataset. Improved accuracy from **85% to 92%+** on a separate dataset.

Product decisions: Built model evaluation capabilities used for production model selection and enterprise sales support; authored the architecture proposal adopted for Instabase's general document extraction backend.

Innovation & teams: Helped secure **four VLAIO innovation grants** as lead researcher and application co-author; supervised **11 Master's thesis internships** at KU Leuven and VUB.

Experience

Probably Approximately Human BV

Belgium / Remote

Independent AI Consultant

Present

- Advise organizations on AI adoption and innovation, and design custom models and systems around their needs.
- Offer AI strategy and roadmaps, generative AI prototypes, agentic automation, and technical due diligence.

Instabase

Remote

Senior Software Engineer, Machine Learning

2024–September 2026

- Designed and shipped DocumentReActAgent, using self-correction to resolve difficult document-processing cases and increase automation coverage.
- Owned InstaLLM, an on-premises language-model solution; built a fine-tuning framework for enterprise-specific model adaptation.
- Built evaluation and benchmarking across model providers to support release decisions, model selection, and enterprise sales discussions.
- Authored the Unified Extractor v2 architecture proposal, separating business schemas, model engines, and workflow orchestration to support product evolution.
- Led the Agent Mode technical team and mentored engineers across three teams. Delivered successful prototypes in in-house company hackathons; both prototypes became integral parts of the product roadmap.

Experience (continued)

Contract.fit (A Netcall Company)

Brussels, Belgium

Artificial Intelligence / NLP Engineer

June 2017–March 2024

- Led a small team delivering document AI for enterprise clients in insurance, finance, and legal services.
- Built and maintained document classification and information-extraction pipelines across seven years of SaaS product development.
- Translated advances in document understanding and uncertainty estimation into production features.
- Co-wrote successful applications for four VLAIO grants, connecting research plans to product development; supervised 11 Master's AI/CS thesis internships and mentored junior engineers.

Oracle & Nuance Communications

Spain / Germany

Earlier Research Experience

2016–2017

Neural dialogue systems at Oracle (2016–2017); language modelling at Nuance (2017).

Core Capabilities

Business & product: AI opportunity assessment; implementation roadmaps; build-versus-buy analysis; technical due diligence; product requirements; stakeholder communication; innovation funding proposals.

AI solutions: Document classification and extraction; generative AI applications; agents and workflow orchestration; retrieval-augmented generation; language and vision-language model adaptation.

Quality & delivery: Evaluation and benchmarking; uncertainty and confidence estimation; production ML pipelines; on-premises deployment; technical team leadership and mentoring.

Selected tools: Python, PyTorch, Hugging Face, FastAPI, Pydantic, Docker; OpenAI, Anthropic, and Gemini APIs. Detailed skills inventory available separately.

Education & Research Credentials

KU Leuven

PhD, Engineering Sciences (Computer Science)

2020–2024

Intelligent Automation for AI-driven Document Understanding.

KU Leuven

MSc, Artificial Intelligence

2015–2017

Speech & Language Technology; Magna Cum Laude.

KU Leuven

MA, Linguistics

2014–2015

Corpus & Usage-based Methodologies; Magna Cum Laude.

Applied research: Creator of the DUDE document-understanding benchmark (ICCV 2023). Published research spanning document AI, model efficiency, and predictive uncertainty, including work at ICML, ICCV, WACV, and ICDAR.

Knowledge sharing: Invited research seminars at Adobe Research and CVC/UAB; conference presentations and technical writing on document AI.

Languages

Dutch (native); English (C2); Spanish and French (C1); German (B2); Portuguese (A2).
